

## Create a backup for AIO CREATOR NEO

Before you run a software update it is useful to backup your remote controls and the entire configuration locally.

You can create or import the backup on the start page of the CREATOR.

To create a backup for NEO, you can simply go to the settings menu and click the “backups” category. Here you can also load an existing backup.

Alternatively you can create a local backup for NEO by simply copying the complete AIO CREATOR NEO user directory including all subfolders. You can read [here](#), where to find the user directory in your operating system.
