

Integrate a Generic IP-Kamera

It is possible to integrate compatible JPG/ MJPG Network-Cameras of brands like Hama, 7links oder other brands/ manufacturers (especially for brands without a NEO Plugin) via the general NEO Plugin Generic IP-Kameras.

For this purpose add a new System camera mit Hersteller and select „Generic IP Camera“ in the manufacturer field. Now select one of the provided model types (try other types, if this type does not work).

You also have to enter the IP-Address and - if necessary - the username and password.

Alternatively you can add the IP-camera as a "JPG camera" using the URL.
