Integrate Logitech Harmony Hub as a gateway

If you are using the AIO CREATOR NEO with a Logitech Harmony Hub plug-in, you can integrate the Harmony Hub as a gateway in the device manager. For this purpose you can use the „search gateway" button, to import the configuration of your Harmony Hub automatically. Alternatively you can configure your Hub manually by clicking the „new gateway" button.

Important note: The Harmony Hub can only be found and imported automatically, if it is in the same subnet as the computer, on which the AIO CREATOR NEO software is used.

If your Harmony Hub has not been found automatically, you can configure it manually. In this case please click the „new gateway" button. Now enter a name, select the type (Logitech Harmony Hub) and enter IP-address, Port-Number, User and Password of your Hub.
