

Integrate mydlink Connected Home Hub as a Gateway

If you are using the AIO CREATOR NEO with a mydlink home plug-in, you can integrate the mydlink connected home hub as a gateway in the device manager. For this purpose you can use the “search gateway” button, to import the configuration of your mydlink connected home hub automatically. Alternatively you can configure your Homewizard manually by clicking the “new gateway” button.

If you use the “search gateway” function, please select “mydlink Connected Home Hub” in the first step.

Important note:

The mydlink connected home hub can only be found and imported automatically, if it is in the same subnet as the computer, on which the AIO CREATOR NEO software is used.

If the mydlink Connected Home Hub has been found, informations such as the IP address will be displayed. Now you have to enter the PIN code of your Hub in the “password” field. Finalize zu import by clicking “Import”.

If your mydlink connected home hub has not been found automatically, you can configure it manually. In this case please click the “new gateway” button. Now enter a name, select the type (Homewizard) and enter IP-address, Port-Number, User and Password of your Homewizard.
