Import Devices from your Samsung Online Account for smart appliances

Once you have integrated your Samsung Online Account as a gateway in the device manager, you can import the smart appliances of this account as a NEO device. To do this open the devices tab and click the button "Import devices".

A menu opens, where you have to select your Samsung gateway. Then the connected devices are detected and listed, so that you can check the boxes of all Samsung smart appliances you want to import as NEO devices.

Please note: Devices only can be imported automatically, if they are connected to the same subnet as the computer on which the AIO CREATOR NEO software is running. If the gateway is not detected automatically, you can integrate it manually by clicking the button "New device" in Device Manager and enter the settings of your gateway.

Assign functions

After you have imported your smart appliances, you can add their functions to remote pages. You can either assign the functions to remote elements on by one or you can use the special samsung plugin elements, where you can add a group element to the page and assign all its elements to one device in one step.

Samsung plugin elements are provided for the following device categories:

- Oven
- Dryer
- Washer
- Refrigerator
- Robot cleaner
- Air conditioner
- Air purifier

Once the samsung plugin element has been integrated to the page, the group can be changed individually. To disband the group click the "disband group" button in the properties menu.
