

## Integrate RWE SmartHome Central Unit as Gateway

If you are using the AIO CREATOR NEO with a RWE SmartHome plug-in, you can integrate the RWE SmartHome Central Unit as a gateway in the device manager. For this purpose you can use the “search gateway” button, to import the configuration of your RWE SmartHome Central Unit automatically. Alternatively you can configure your RWE SmartHome Central Unit manually by clicking the “new gateway” button.

If you use the “search gateway” function, please select “RWE SmartHome” in the first step.

Important note:

The RWE SmartHome Central Unit can only be found and imported automatically, if it is in the same subnet as the computer, on which the AIO CREATOR NEO software is used.

If your Central Unit has been found, it can be imported by clicking the “import” button. If necessary you additionally have to enter User and Password of your RWE Smart Home Central Unit.

If your RWE SmartHome Central Unit has not been found automatically, you can configure it manually. In this case please click the “new gateway” button. Now enter a name, select the type (RWE SmartHome) and enter IP-address, Port-Number, User and Password of your RWE SmartHome Central Unit.
