Functional Testing and preview via App Simulator

To test your remote including the assigned functions and integrated live images in action, you can use the app simulator. After clicking the app simulator button, a pop-up window will open in the remote resolution, which you can use like the app.

Change app simulator device

If the wrong mobile device is displayed as "background image" in the app simulator, you can change this setting. To do this, go to the "Remote"-submenu in the main menu and select the "Global settings" and "Information" item. Select the desired device from the dropdown list (if available).
