

## Use Templates / duplicate page

To avoid having to create the remote page from the scratch, NEO contains a set of templates for different categories (eg lighting, shutters, heating), that you can import into the remote. Once you have imported a template remote page, you can easily customize it.

To add a new remote page click the Plus-Button. The following menu opens:

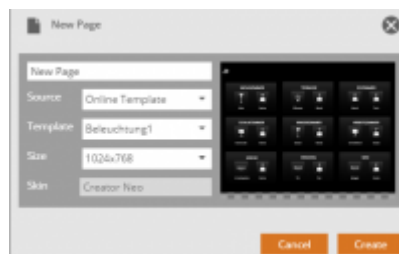

In the dropdown “Source” you can choose between:

1. duplicate a page → copies an existing page from any saved remote
2. none (empty page) → adds an empty page
3. Online Template → imports an online template

### Using Online-Templates:

By clicking “Online Templates” you now can choose of a great variety of different use case-templates for different screen resolutions (size).

Click “Create” to import the selected template page to your remote.
