

Round slider

In addition to linear sliders, round sliders can also be used for dynamically adjustable status devices and some other devices (e.g. some dimmers) can also be integrated into the remote control interface. With this element, the status of the device can be set very easily by simply moving it. It is inserted by dragging the symbol onto the remote control.

An action and / or a status can be assigned to the slider in the properties menu on the right. In addition, the operator can set whether the slider should react to a circular wiping movement or a linear movement from left to right. The display of the values is optional and can be activated by ticking the appropriate box. The text can be formatted using CSS.

Different styles can also be selected by clicking the "Style" button.
