

Import devices from your netatmo cloud server account

After you have integrated a netatmo gateway you can import the devices from your netatmo cloud server account. To do this go to the devices tab of the device manager and click the “Import devices” button. Now select “Netatmo: Netatmo” in the dropdown menu and all supported devices of your account will be listed.

Check the box in front of any device you want to import and use the dropdown to choose the room you want to import the device to.

Finalize the import process by clicking on the “import button”.
