

Integrate tado smart thermostat as a gateway

If you are using the AIO CREATOR NEO with a tadoSmart plug-in, you can integrate the tado thermostat as a gateway in the device manager.

In the first step please click the „new gateway“ button and enter a name. Now select “tado” for “type” and enter user and password of your tado thermostat (can be found in the original tado app).

Important: Because your tado-Smart Thermostat is integrated via personal user-account on the tado cloud-server, an internet connection is required.
