

## Image Element

To add a new image element to the remote page click on the image-icon in the elements menu. You can select the image in the icon section of the properties menu by clicking on the edit-icon (pencil). You can lock elements with the anchor. If several elements overlap, they can be moved to the foreground or background using the layer options.

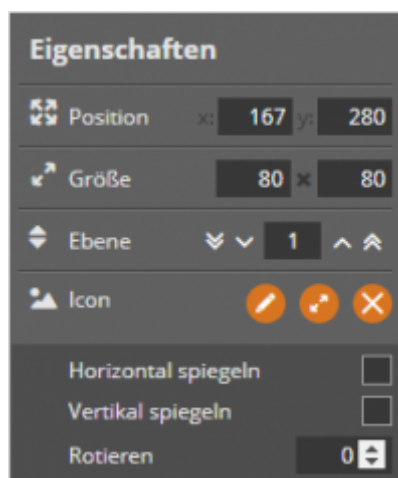

You have two options to assign an image: Either you select one of the images stored in the NEO image catalog or you import an individual image (supported formats: PNG and JPG ) from your PC.

Generally you can use image elements just as a design object without any function. Additionally you can use image elements also to display dynamic device states graphically.

→ [dynamic state image](#)

Graphics can also be mirrored or rotated starting with AIO CREATOR NEO Version 2.5.0.
