

Auto-generating pages

Since NEO version 2.4.3, the function to automatically generate remote pages has been integrated in AIO CREATOR NEO. By using this function, remote pages will be generated automatically based on the rooms created in the device manager. Additionally corresponding navigation buttons will be created on the index page to navigate to the different room pages. Each room page contains a home button, which can be used to navigate back to the index page. The easiest way to add elements and functions to the new pages is by using [Widgets](#). But you can also design your page with single elements.

To start the automatic page generation, click on the left page column.

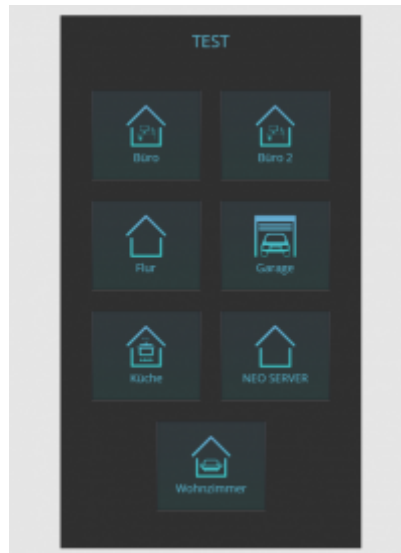

Then follow the instructions step by step.

Finally NEO generates the remote pages according to your selection.
