General information

Unfortunately, it is not possible to apply the settings of the old alarm to the new alarm. When you switch to the new alarm, the old alarm settings are deleted. You should only switch to the new alarm if you are sure, that the old alarm can be deleted.

Important: Switching to the new alarm is only possible from app version 1.17 and firmware version 1.14 with a gateway of the V6 series.

If the old alarm is not in use, the app automatically switches to the new alarm.

Switch to the new alarm

To switch to the new alarm, go to Settings → Alarm. If you have the right app and firmware version, a button occurs to activate the new alarm.

The PIN is required to delete the current alarm. You cannot switch to the new alarm without a PIN. Once switched to the new alarm, it is not possible to restore the old alarm.
