

End position settings and travel times for shutters or blinds

Currently only for Homematic and Homematic IP roller shutters

Immediately after teaching in shutters or blinds, you can define the end position settings or travel times of your shutters and blinds directly in IQONTROL NEO.

If you want to change the travel times and end position settings again at a later point in time, you can also change them later via the device settings (Rooms → Edit room → Select device).

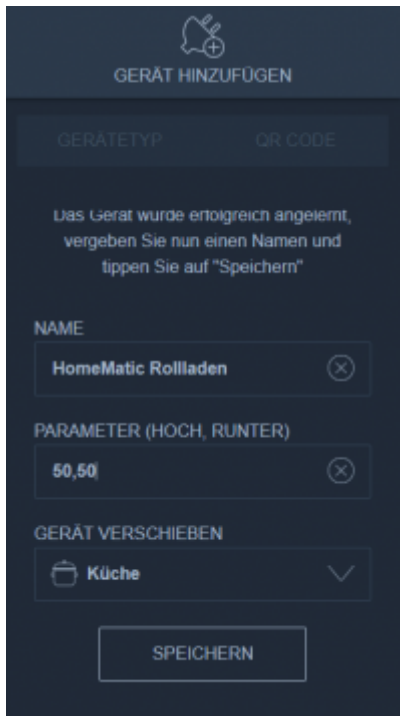

Set the travel time with Homematic IP and a gateway of the V6 series

The screenshot shows the 'GERÄT HINZUFÜGEN' (Add Device) screen in the IQONTROL NEO app. It features a dark blue background with white text and input fields. At the top, there's a plus icon and the text 'GERÄT HINZUFÜGEN'. Below this are two tabs: 'GERÄTETYP' (selected) and 'QR CODE'. Under 'GERÄTETYP', there are three input fields for travel times in milliseconds, each with a clear (X) button: 'FAHRZEIT AUF (MILLISEKUNDEN)' with '90000', 'FAHRZEIT AB (MILLISEKUNDEN)' with '90000', and 'LAMELLEN-FAHRZEIT (MILLISEKUNDEN)' with '2000'. Below these fields is a button labeled 'STARTE KALIBRIERUNG'. At the bottom, a message states: 'Das Gerät wurde erfolgreich angelehrt, vergeben Sie nun einen Namen und tippen Sie auf "Speichern"'.

The travel time is specified here in milliseconds for up and down (and, in the case of blinds, also for slats). The roller shutter is automatically adjusted to match via * Start calibration *.

Set travel time with HomeMatic and a gateway of the V6 series

GERÄT HINZUFÜGEN
