

Quick Reference OSRAM Lightify Plugin

Integrate OSRAM Lightify central unit as a gateway

If you are using the AIO CREATOR NEO with a OSRAM Lightify plug-in, you can integrate the OSRAM Lightify central unit as a gateway in the device manager.

Important note: Before you import the OSRAM Lightify central unit in our NEO Software, the OSRAM Lightify central unit must be paired with the OSRAM bulbs/ lamps via OSRAM Original App. Only when the OSRAM bulbs/ lamps can be controlled via the OSRAM Original App, it is possible to import them via central unit.

To import the OSRAM Lightify central unit as a new gateway, please click the „search gateway“ button in the device manager. Now select „OSRAM LIGHTIFY Gateway“ and then “search gateway”. If the gateway has been found, select it and then click “Import”.

Import devices from gateways

For various gateways (i.e. Homematic CCU, hue bridge, netatmo central unit, Rademacher Homepilot, ...) you can automatically import their connected devices / components into the NEO Device Manager. To do this, click the button “Import devices”.

A menu opens, where you have to select the specific gateway. Then the connected devices are detected and listed so that you can check the boxes of all devices you want to import.

Please note: Devices only can be imported automatically, if they are connected to the same subnet as the computer on which the AIO CREATOR NEO software is running. If the gateway is not detected automatically, you can integrate it manually by clicking the button “New device” in Device Manager and enter the settings of your gateway.
