

Import your individual images

You can easily import your own graphics (PNG and JPEG) to CREATOR NEO to use them for example as button icons or background images. To do this, open the images catalog and click the "Import tab". Now click the button "choose file" or use the drag & drop function.

In the next step enter the parameters "type", "style" and "name" for the image. When assigning these parameters please consider that all images are sorted by the categories "type" and "style". The "name" of the image is especially important for status graphic sets, since the image name has to match the state names. → [How to import individual status images](#)
