## **Task Manager**

With the Task Manager you can manage time- and event-triggered tasks (ie actions that are started automatically to a specified time or upon the occurrence of a specified event) for all actions that will be executed by the AIO GATEWAY.

It is also possible that a received infrared command can trigger the transmission of a radio command (i.e. you can switch of the lights with a button of your normal Infrared TV remote control with this feature).

| 1                      | Taik Manager               |  |
|------------------------|----------------------------|--|

|                        | / Deva-Alter-Switch and    |  |
|                        | / Sedwaraphi               |  |
|                        | > Instrumpt.)              |  |
|                        | / Decembran (Jainsh un)    |  |
|                        | / Description (Jamin et)   |  |
|                        |                            |  |
|                        |                            |  |
|                        |                            |  |
|                        |                            |  |
|                        |                            |  |
|                        |                            |  |

To create a new task click on the "+" icon in the tasks box and define a task name. Now you can assign triggers and actions by clicking the respective "+" icon.

 $\rightarrow$  Define triggers

 $\rightarrow$  Define actions
