

# LED colors on the V6 Plus

Below you will find an overview of the meaning of the LED colors on your V6 Plus.

**LED shines violet:** The gateway is in recovery mode.

**LED flashes violet:** The gateway is installing a firmware update.

**LED flashes yellow:** No connection to the network.

**LED flashes red:** Duty cycle.

**LED shines red during firmware update:** Firmware update failed, put the gateway in [recovery mode](#) and apply the update manually.

## Further processes that are signaled by the LED

If the start process is successful, the LED runs through the colors cyan, blue and white.

During the reset process, the LED runs through the colors green, orange / yellow and red. Depending on which color you release the reset button, the gateway will be reset to a different mode. Read more about this: [gateway reset](#)
